

AUTHOR'S CORRECTION

Identification and Characterization of a Human Herpesvirus 6 Gene Segment Capable of Transactivating the Human Immunodeficiency Virus Type 1 Long Terminal Repeat in an Sp1 Binding Site-Dependent Manner

JINHAI WANG, CLINTON JONES, MICHAEL NORCROSS, ERNST BOHNLEIN, AND ABDUR RAZZAQUE

*Division of Viral Products, Center for Biologics Evaluation and Research, Bethesda, Maryland 20892; Department of Veterinary Science,
Center for Biotechnology, University of Nebraska, Lincoln, Nebraska 68583; and Vienna International
Research Cooperation Center, University of Vienna, Vienna, Austria*

Volume 68, no. 3, p. 1707, column 2, line 24: "RF2" and "RF5" should read "P399" and "B115," respectively.

Page 1710, column 1, last sentence: We stated that these studies localized the major transactivating domain of pZVH14 to a 1-kb *HincII-XbaI* fragment. We wish to correct this statement by saying that a larger fragment containing the *HincII-XbaI* fragment is required for transactivation. Digestion with *HincII* abolishes transactivation.
