AUTHOR’S CORRECTION

Herpes Simplex Virus Processivity Factor UL42 Imparts Increased DNA-Binding Specificity to the Viral DNA Polymerase and Decreased Dissociation from Primer-Template without Reducing the Elongation Rate
Klaus Weisshart, Connie S. Chow, and Donald M. Coen
Department of Biological Chemistry and Molecular Pharmacology and Committee on Virology, Harvard Medical School, Boston Massachusetts 02115

Page 63, column 2, line 11: “(26 to 33 nt/s)” should read “(19 to 22 nt/s).”
These changes correct miscalculations of elongation rates from the data in Fig. 6 but do not affect the conclusions of the paper.
