EX OFFICIO

Helen R. Whiteley, *President* (1975-1976)
J. Mehsen Joseph, *Secretary*

Harlyn O. Halvorson, *Vice-President* (1975-1976)
Brinton M. Miller, *Treasurer*

The *Journal of Virology*, a publication of the American Society for Microbiology, 1913 I St., N.W., Washington, D.C. 20006, is devoted to the dissemination of fundamental knowledge concerning viruses of bacteria, plants, and animals. Investigators are invited to submit reports of original research in all areas of basic virology, including biochemistry, biophysics, genetics, immunology, morphology, and physiology. The *Journal* is issued monthly, two volumes per year. The subscription price is \$60 (foreign, \$61) per year; single copies are \$6.00 (foreign, \$6.25). Members of the American Society for Microbiology may receive the *Journal* as part of their dues. Correspondence

relating to subscriptions, reprints, defective copies, availability of back issues, lost or late proofs, disposition of submitted manuscripts, and general editorial matters should be directed to the ASM Publications Office, 1913 I St., N.W., Washington, D.C. 20006 (area 202 833-9416).

Second-class postage paid at Washington, D.C. 20006, and at additional mailing offices.

Made in the U.S.A.

JOURNAL OF VIROLOGY

INSTRUCTIONS TO AUTHORS

Correspondence. Submit manuscripts in duplicate (original and one copy) to ASM Publications Office, 1913 I St., N.W., Washington, D.C. 20006.

General policy. Any manuscript submitted must be a report of unpublished original research, which is not being considered for publication elsewhere.

The "editorial style" of the *Journal* essentially follows the *CBE Style Manual* (3rd ed., AIBS, 1972). Biochemical nomenclature, including abbreviations and symbols, should follow the recommendations of the IUPAC-IUB Commission on Biochemical Nomenclature (CBN) and the Instructions to Authors of *J. Biol. Chem.* and *Arch. Biochem. Biophys.* (first issue of each year), which are based upon the CBN Recommendations and contain a list thereof. Reprints of these Recommendations and advice on biochemical and chemical nomenclature are available from the NRC Office of Biochemical Nomenclature (W. E. Cohn, Director), Biology Division, Oak Ridge Nat'l. Lab., Box Y, Oak Ridge, Tenn. 37830 (phone: 615-483-8611, Ext. 3-7514). Normally, abbreviations (except those of standard units of measurement and symbols of the elements) should be defined and introduced parenthetically at first use in the text. Certain abbreviations will be accepted without definition in the title, abstract, and text. Among these abbreviations are: DNA (deoxyribonucleic acid); RNA (ribonucleic acid); rRNA (ribosomal RNA); mRNA (messenger RNA); tRNA (transfer RNA); AMP, ADP, ATP, dAMP, dADP, dATP (for the respective 5' phosphates of adenosine or the other nucleosides, using appropriate letter symbols); 2'-AMP, 3'-AMP, 5'-AMP (the 2', 3', and 5', where needed for contrast, phosphates of the nucleosides); DNase (deoxyribonuclease); RNase (ribonuclease); P_i (orthophosphate); PP_i (pyrophosphate); mol wt (molecular weight); UV (ultraviolet); PFU (plaque-forming units); Tris (tris(hydroxymethyl)aminomethane); DEAE- (diethylaminoethyl-); and EDTA (ethylenediaminetetraacetate). Genetic symbols should essentially follow the recommendations of Demerec et al. (*Genetics* 54:61, 1966). Enzyme activities should be expressed in the terms set out in CBN's *Enzyme Nomenclature* (1972) (Elsevier Scientific Publishing Co.). Lengths, weights, volumes, and molarities should make use of the prefixes m, μ , n, and p (for 10⁻³, 10⁻⁶, 10⁻⁹, and 10⁻¹², respectively), where applicable, avoiding such compound prefixes as m μ and $\mu\mu$. Metric units should be employed as much as possible. The Editors reserve the privilege of editing manuscripts to make them conform to the above-mentioned stylistic conventions.

Form of manuscript. All parts of the manuscript should be typed double-space or, preferably, triple-space. Most manuscripts can and should be divided into the following sections: Abstract, Introduction, Materials and Methods, Results, Discussion, Acknowledgments, and Literature Cited. Only one weight of heading (paragraph lead-in) should be used within each section.

Title. A single statement of the subject of a paper is preferred to a main title-subtitle arrangement. A short version of the title (no more than 46 characters and spaces) should be supplied for use as a running head.

Abstract. An Abstract appears at the beginning of each paper in the *Journal*. The abstract should not exceed 250 words.

Literature Cited. In the text, references are cited by number. The Literature Cited section should be typed in alphabetical order, by first author, and numbered. Names of journals are abbreviated according to *Bibliographic Guide for Editors & Authors* (American Chemical Society, 1974). Literature citations should be restricted to closely pertinent papers. Citations of abstracts, theses, "unpublished data," "personal communication," and "in press" will not be accepted in the Literature Cited, but may be used parenthetically in the text.

Tables. Each table should be typed on a separate page. The data should be arranged so that columns of like material read down, not across. The headings should be sufficiently clear so that the meaning of the data will be understandable without reference to the text. Explanatory footnotes are permitted, but detailed descriptions of the experiments are not. The materials and methods used to gain the data should properly remain in the section of that name.

Figures. A complete set of figures, preferably glossy photographs, should accompany each of the two copies of the manuscript. Each figure should be numbered and should include the name of the author, either in the margin or on the back (marked lightly with a soft pencil). Graphs (*submit as photographs*) should be finished drawings not needing further artwork or type-setting. Absolutely *no* part of a graph should be typewritten (except the legend, which should be typed on a separate page). All lettering should be done with a lettering set. Most graphs will be reduced to one-column width, and *all* elements in the drawing should be prepared to withstand this reduction. The legend of the figure should provide enough information so that the figure is understandable without reference to the text. Experimental details from Materials and Methods should not be repeated in figure legends.

Notes. The accepted form for Notes is somewhat different from the foregoing. Contributors should consult a recent issue of the *Journal* for style. Notes should not exceed 500 words. The Abstract should not exceed 25 words. Papers submitted as Notes which are fragments of full-length papers are not acceptable. Consideration will be given to publication of Notes which consist of commentaries or interpretations of principles of virology.

Nomenclature of viruses. Viruses named after a disease should be written as separate words in lower-case roman, except when the name of the disease is derived from a proper noun: herpes simplex virus, measles virus, Newcastle disease virus, poliomyelitis virus, varicella-zoster virus, vaccinia virus.

Most other viruses should be written as a single word in lower case: adenovirus, coxsackievirus, cytomegalovirus, echovirus, herpesvirus, mengovirus, picornavirus, poliovirus, poxvirus.

Copyright. Once a paper has been published in the *Journal*, which is a copyrighted publication, the legal ownership of all parts of the paper, including the illustrations, has passed from the author to the *Journal*. If the same author, or any author, wishes to republish material previously published in the *Journal*, he must first receive written permission from ASM.

Reprints. Reprints (in multiples of 100) will be furnished contributors when ordered in advance. A table showing the cost of reprints, and an order form, will be sent with the proof.
