The *Journal of Virology* (ISSN 0022-538X), a publication of the American Society for Microbiology, 1913 I St., N.W., Washington, DC 20006, is devoted to the dissemination of fundamental knowledge concerning viruses of bacteria, plants, and animals. Investigators are invited to submit reports of original research in all areas of basic virology, including biochemistry, biophysics, genetics, immunology, morphology, physiology, and pathogenesis and immunity. Instructions to authors are published in the January issue each year; reprints are available from the editors and the Publications Department. The *Journal* is issued monthly, one volume per year. The nonmember subscription price is \$350 per year; single copies are \$30. The member subscription price is \$41 (foreign, \$63 [air drop shipping]) per year; single copies are \$8.00. Correspondence relating to subscriptions, reprints, defective copies, availability of back issues, lost or late proofs, disposition of submitted manuscripts, and general editorial matters should be directed to the ASM Publications Department, 1913 I St., N.W., Washington, DC 20006 (phone: 202 833-9680).

Claims for missing issues from residents of the United States, Canada, and Mexico must be submitted within 3 months after publication of the issues; residents of all other countries must submit claims within 6 months of publication of the issues. Claims for issues missing because of failure to report an address change or for issues "missing from files" will not be allowed.

Second-class postage paid at Washington, DC 20006, and at additional mailing offices.

Leading the way in molecular and cellular biological research, the *Journal of Virology* publishes fundamental new information concerning the viruses of bacteria, plants, and animals. These reports of original research use the approaches of biochemistry, biophysics, cell biology, genetics, immunology, molecular biology, morphology, physiology, and pathogenesis and immunity. Going well beyond merely cataloging new data, the articles contain experimental observations that address a hypothesis, lead to new concepts, and indicate new directions in research.

The *Journal* specifically encourages publications demonstrating the nature of the relationships between

viruses under study and their host cells or organisms. Journal sections include viral pathogenesis and immunity and virus-cell interactions, and highlight research at the cell biology-virology-organismic biology interface.

Because viruses serve as vital tools for studying life processes at the cellular and subcellular levels, molecular and cellular biologists, as well as virologists, should strongly consider a subscription to the *Journal of Virology*.

For immediate access to the most timely and important developments in virus research, complete the coupon below and return it to ASM.
