Cover photograph (Copyright © 2016, American Society for Microbiology. All Rights Reserved.): Coimmunolocalization of *Tomato yellow leaf curl virus* (TYLCV) and heat shock protein 70 (HSP70) in the dissected midgut of a whitefly *Bemisia tabaci* adult female after virus acquisition from an infected tomato plant. Polyclonal antibodies against the virus coat protein (green) and against HSP70 (red) were used to localize the virus and HSP70, respectively. Nuclei are stained with 4',6-diamidino-2-phenylindole (DAPI) and shown in blue. HSP70 specifically colocalizes with TYLCV in the descending midgut and the filter chamber.
