COVER IMAGE

Cover photograph: Bluetongue virus (BTV), a complex nonenveloped double-stranded RNA virus, causes serious illness and death in sheep and other ruminants worldwide. Two outer capsid proteins, VP2 and VP5, coordinate cell entry to establish the infection. The structure of VP2 highlighting the pH-sensing tetrahedron CCCH zinc finger motif (in red, Zn in yellow) and the conserved histidine residues (in magenta) is shown. The background shows a confocal image of BTV trafficking during entry taken 15 min postinfection (BTV marked by VP2 in green, endosomes marked by EEA1 in red). (See related article in February 2019, vol. 93, no. 4, e01897-18.) (Copyright © 2019 Wu et al. CC-BY 4.0)

SPOTLIGHT

Articles of Significant Interest in This Issue

e00485-19

STRUCTURE AND ASSEMBLY

Thermostability of the Foot-and-Mouth Disease Virus Capsid Is Modulated by Lethal and Viability-Restoring Compensatory Amino Acid Substitutions

e02293-18
